Cauldryn™ Changes The Game With First-of-its-Kind Water Bottle That Can Bring Water To A Boil From A Battery

Vandalia, MO. (June 19, 2017) -- No longer do you need an outlet or, in remote locations, fire, to boil water. Number 6 Brands is announcing the launch of a new water bottle, Cauldryn™, offering a revolutionary portable heated beverage container with the ability to boil water from a battery.

The Cauldryn™ bottle opens up new possibilities to outdoor enthusiasts as the first-of-its-kind water bottle that can boil water or keep the contents at the ideal hot beverage drinking temperature for extended periods of time with a battery. The bottle is a powerful tool for outdoor enthusiasts, where there is typically limited access to fire and electricity.

“Safe drinking water is key to survival. Boiling is the best way to make water safe.

You can't always get a fire, but if you can get a boil you can greatly increase your chances of survival,” said Mykel Hawke, survival expert and host of “Man, Woman, Wild” and “One Man Army”.

Featuring a modular design, the Cauldryn™ bottle comes in two different models, the Cauldryn™ Fyre™ and Cauldryn™ Fyre™ Mobile. Both offer a 16-ounce, stainless steel, vacuum insulated bottle with lid, revolutionary Fyre™ heating element, and the Cauldryn™ Fyre™ Mobile model includes a rechargeable battery.

The Fyre™ heating element attaches to the bottle and has four different heat settings—Hot, Extra Hot, Brew, and Boil, allowing the contents to reach up to 212 degrees. The Fyre™ heating element can also run directly from either an AC or DC power source using the included AC base or optional DC base for unlimited boil, brew, high heat, or drink cycles.

One single bottle has limitless applications, including boiling water to cook, making soup, tea, and coffee, or sterilizing water.

Cauldryn™ is running a Kickstarter campaign in the month leading up to its debut at the Outdoor Retailer trade show. With a team of outdoor industry professionals bringing years of experience and ideas to the project, the team is looking for the financial assistance to bring this revolutionary bottle to the consumer market.

With Cauldryn™, users will never have to worry about access to fire or electricity to sterilize, boil, or keep beverages hot again. It's something every homeowner should own in case of emergency. The insulated mug is the perfect accessory for camping trips, emergency situations, and for everyone who wants to keep their beverages at the ideal hot drinking temperature all day long.

About Cauldryn

The Cauldryn™ Fyre™ system will forever change the way you survive. Using its revolutionary Fyre™ heating element, you now have the power to boil liquids with the click of a button. The rechargeable battery is the only power you need to bring 32° F, liquid water to boil. With Cauldryn™, a boil is just a click away.
